Specifications

HD-PLC Ethernet Adaptor

Power Line Communication Interface		
Standard	HD-PLC	
Actual transmission speed*1	UDP: Max. 70 Mbps	
	TCP* ² : Max. 42 Mbps	
Maximum recommended no. of adaptors per network* ³	16 (including the Master)	
Maximum recommended no. of network devices connected to each adaptor*4	8	
LAN Interface		
Standard	IEEE 802.3/IEEE 802.3u	
Interface	10 Base-T	
	100 Base-TX	
	Auto MDI/MDI-X	
Protocol	IPv4, IPv6, TCP, UDP	
Access method	CSMA/CD	
General		
Operational environment	0-40°C (32-104°F)	
	20%–85% humidity (without condensation)	
Dimensions (W x D x H)	Approx. 121 mm x 40 mm x 70 mm	
	(4 3/4″ x 1 9/16″ x 2 3/4″)	
Weight	240 g (0.53 lb.)	
Power supply	Input 120 V AC (USA) 100-240 V AC (Others)	
Power consumption	er consumption 4 W	

HD-PLC Interface		
	Frequency band	4–28 MHz
	Modulation	Wavelet OFDM (16 PAM-2 PAM)
	Transmission PHY rate	Max. 190 Mbps* ⁵
	Access method	CSMA/CA
		TDMA*6
	Error correction	Reed-Solomon encoder/decoder
		Convolutional encoder/Viterbi decoder
	Encryption	AES 128-bit encryption
	Communication distance	Approx. 150 m (490 ft.)* ⁷

*1 Results may vary depending on electrical conditions, network environment and other factors. For information on how transmission speed is measured, access the Panasonic PLC Support Site at: http://panasonic.co.jp/pcc/products/en/plc/

*2 Using Linux FTP. *3 Performance may be affected as more adaptors are added to the network *4 Connecting more network devices to an adaptor may increase network traffic and affect performance.

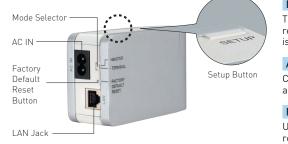

*5 This is the theoretical maximum data transmission speed of the HD-PLC standard. *6 The HD-PA100 does not support TDMA.

*7 Varies depending on the electrical environment.

Part Names

Recommended

BL-PA100

Direct connection to the wall outlet, with other loads

AC Adaptor Charger

connected via a noise filter power strip.

Noise filter

power strip

Mode Selector

The position of this selector during registration determines whether the adaptor is used as the Master or as a Terminal.

AC IN

Connects the adaptor to AC power as well as to the HD-PLC network.

Factory Default Reset Button Used to reset the adaptor and erase its

registration.

Recommended Connection | We recommend plugging the adaptor directly into a wall outlet whenever possible.

X Not Recommended

Battery chargers (including cell

devices, when they are connected

BL-PA100

AC adaptor or charger

PC

phone chargers) and other

to the same power outlet

*If the following kinds of electrical appliances are located near the PA100 Master or PA100 Terminal, or the following connections are used, the signal may be obstructed and the transmission speed may be reduced vacuum cleaners, dryers, electric drills, and other appliances with electric motors (only when the appliances are being operated); lighting equipment such as touch-sensor lights and halogen dimmer lights, or compact battery chargers for cell phones and other devices (when they are connected to the same power outlet as the PA100); connection of the PA100 to a power outlet with multiple loads, or to a power strip; or transmission to extremely distant rooms.

Outlet

such as a broadband router, hub, computer, etc.

Connection to a power

Power Line Communication HD-PLC Ethernet Adaptor

BL-PA100 BL-PA100KT

*Set of two BL-PA100

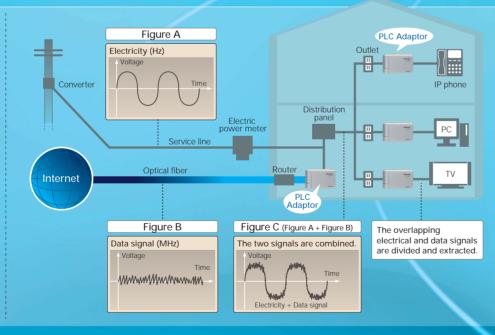

HD-PLC Introducing the Super-Easy Home Network System

The new HD-PLC Ethernet Adaptor makes an exciting breakthrough in home network systems. It brings true satisfaction by solving the problems of slow data transmission, difficult settings, insufficient safety, and limited applications. Using just the ordinary power outlets in your home, Panasonic's HD-PLC Ethernet Adaptor will let you easily enjoy the world of the Internet.

PLC Operating Principle

Power Line Communication (PLC) is a technology that uses power lines to both supply electric power and transmit data. Electricity travels in large slowly changing waves (figure A), while data signals move in small, quickly changing waves (figure B). Since these waves travel at different speeds, there is no mutual interference when they travel together (figure C). This makes it possible to send data signals through power lines, and access the Internet from power outlets. Original Panasonic HD technology uses this principle to provide the large data transmission capacity and high speed of the HD-PLC Ethernet Adaptor.

Everyone Smiles with the HD-PLC Ethernet Adaptor

Excellent Utility

Easy Set-up

High-Speed Communication S

movies, music, and more with eas

Economy ²

Very economical. No need to pay a lot of money for a house LAN system, and no expensive cables to buy.

High Reliability D

Superb security functions greatly boost reliability, while keeping the set-up fast and easy.

Great Features for Enhancing Home Entertainment

Excellent Utility Can be used anywhere that has a power outlet. The HD-PLC Ethernet Adaptor turns every power outlet in the house into an Internet access point. Just like plugging an electric cord into the outlet, you insert the

1

HD-PLC Ethernet Adaptor plug and vou're ready to log on to the Internet. It's a super-easy home network, with no need for complicated cables.

Easy Set-up — No PC Required

There's no tricky installation or complicated settings. Just take the BL-PA100KT*1 out of the box and plug it into the power outlet. Set up the other equipment on the network, such as routers and PCs, as described in their respective instructions. Adding more HD-PLC Ethernet Adaptors^{*2} is easy too, using the quick 3-step procedure shown here.

*1 Contains a set of two BL-PA100 units. One HD-PLC Ethernet Adaptor can be set as the Master unit, and individual Terminal units can be registered. One of the BL-PA100KT units is set as a Master unit and the other is set as a Terminal unit when they are shipped from the factory. *2 BL-PA100

Settings are easy for anybody to make.

BI -PA100 (Master)

Adding more HD-PLC adaptors 1. Plug it in 2. Push two buttons 3.Watch it light up Plug the Master and Push the Setup button on The PLC lamp lights up to show Terminal units into the that set-up is complete. You can each unit same power outlet. move the units anywhere you want to go online at home Master Master PUSH Termina PLC Master/Terminal

High-Speed Communication

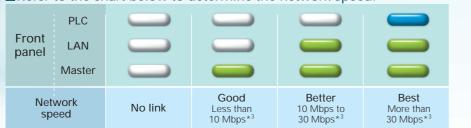

Fast, comfortable communication of high-volume data. At a theoretical maximum transmission speed of 190 Mbps, the system is faster than a wireless LAN system, even when comparing actual system speeds. Also, a simple speed measurement function*1 shows the communication speed between Master and Terminal units.*2 The speed is measured by simply pressing a button on the Terminal, so you can easily find which power outlets give you the highest communication speed for a

more comfortable network environment. You no longer have to feel frustrated because of slow data transmission

*1 The indicated speed is only valid for the moment at which it was measured. It does not imply that the indicated speed vill continue *2 It does not indicate the communications sneed hetw

Fast, comfortable communication of high-volume data.

Refer to the chart below to determine the network speed

*3 Approximate data transmission speed when transmitting data using the UDP protocol

Economy - No Wiring Needed

No need to drill holes in the wall or use unsightly cables. Because you can use your existing electrical wiring and power outlets, you save the expense of wiring. You also don't need to extend any cable

modem or router cables to your PC, so there is no need to drill holes or run cables along the floor or wall. In addition to being economical, this preserves the room's appearance.

High Reliability

5

The HD-PLC Ethernet Adaptor comes standard with AES* 128-bit encryption, and the security settings are made automatically without any need for a PC. This easy set-up ensures a high level of safety and no setting mistakes. Also, because it uses household power outlets, data communication is not blocked by obstacles like

walls as it is with wireless LAN systems, so you enjoy smooth and easy network communication.

*AES stands for Advanced Encryption Standard. It is a next-generation encryption standard approved in 2001 by the National Institute for Standards and Technology (NIST), an organization under the U.S. Department of Commerce, as a standard encryption technique to be adopted by the U.S. government Vulnerabilities discovered in the previous DES (Data Encryption Standard) were eliminated in AES

Panasonic HD-PLC Features

HD-PLC is a proprietary Panasonic technology that enables high-speed, high-quality, stable data transmission.

Wavelet OFDM System

The HD-PLC PHY (physical layer) uses Wavelet OFDM (Orthogonal Frequency Division Multiplexing) technology to achieve highly efficient transmission with characteristics that exceed even FFT (Fast Fourier Transform)-based OFDM systems. Wavelet OFDM features greater speed efficiency and forms a deeper "flexible notch" that prevents interference with shortwave and other broadcasts. This is achieved by appropriately modulating the sub-carrier and by including no guard interval.

Stable Data Communication Performance

The BL-PA100 guickly detects fluctuations in the data transmission path caused by noise and other factors, and determines the optimal data transmission method to enable maximum throughput at that point in time and achieve stable communication performance. Strong error correction coding and a diversity mode also boost reliability in poor-quality home power lines.

3

No need to drill holes in the wall or use unsightly cables

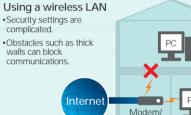

Without HD-PI C Adaptor LAN cables must be used for connection. The unsightly cables ruin the appearance of the room

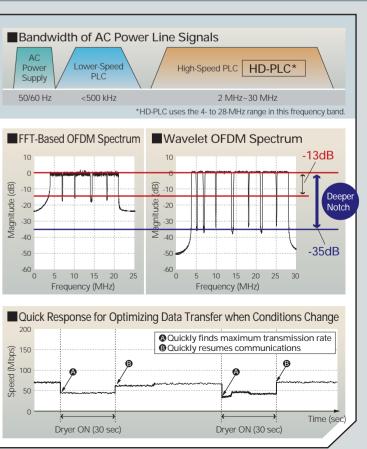

without cables With HD-PLC Adaptor

Neat wall

There is no need to route cables, and it is economical. The room also looks neat without any cables in sight.

Superb security features without complicated settings.

Enjoy Expanded Data Communications, Easy Image and Sound Distribution, and Greater Security

With the HD-PLC Ethernet Adaptor, Panasonic opens the door to a truly ubiquitous home network system.

The age of ubiquitous networking continues to evolve. As a core for the ubiguitous home network, Panasonic recommends a network system based on the HD-PLC Ethernet Adaptor. Going beyond the simple enjoyment of Internet use or a home LAN system, this opens the door to IP communications as well as the free exchange of images and sounds with a high level of security overall. It also lays the groundwork for a total home network system that will let you control your home appliances with your cell phone from just about anywhere. You can look forward to a whole new lifestyle with Panasonic's HD-PLC Ethernet Adaptor.
